

Level 0

Challenge A

Directions:

In the `Haskell_Challenges.hs` file, create a function called `sanityCheck` that does the following:

The function will return 42. That's it. Just return 42. No parameters, just return a simple numeric literal.

The datatype of the function should look like this:

```
sanityCheck :: Int
```

Examples:

```
{- call -}    sanityCheck  
{- returns -} 42
```
